

1. A personal lubricant suitable for direct application to the tissues of a user in the absence of application of cosmetic substances for direct dermal and transdermal functionality consisting essentially by weight of from about 2 to 10 percent of a cross-linked silicone rubber and 90 to 98 percent of cyclopentasiloxane to provide a manually spreadable paste having a viscosity of greater than about 30,000 cP.

2. The lubricant set forth in claim 1, further comprising silicone oil soluble antiseptic and antimicrobial properties.

3. The lubricant set forth in claim 1, further comprising oil soluble materials for stimulating nerve end sensation.
